An immersive escape room where losing a sense unlocks empathy

When we truly engage our senses, we unlock a world beyond the screen

How do we adapt when a sense is missing?

PEOPLE WITH DISABILITIES:

- Can struggle with social isolation

- Difficulties with integrating in society

Have to deal with others assumptions and misconceptions

Each sense has a different impact in our lives

SOCIAL INTERACTION

SOCIAL ISOLATION

How?

SensEscape is an experience where participants face challenges with a sensory limitation. It's designed to alter how participants perceive the world, helping them understand and empathize with the daily struggles of individuals living with sensory disabilities, by combining teamwork and communication. This experience encourages participants to navigate obstacles while exploring the impact of sensory loss, and in so gain insight on

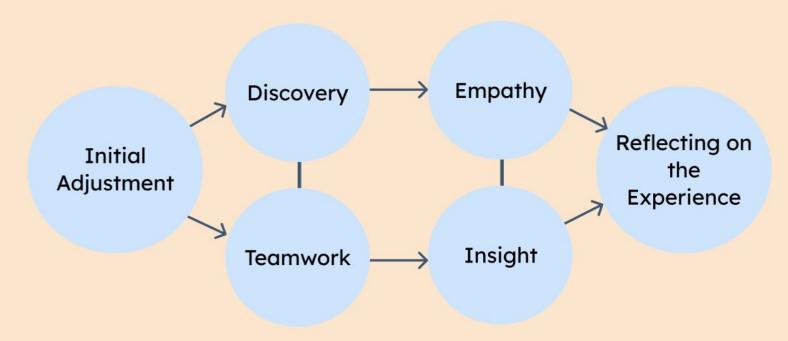

how disabilities can affect people's everyday life.

ESCAPE ROOM

- Three people work together to complete three challenges
 - 1: Shape up!
 - 2: Cipher me this!
 - 3: Now that's called Teamwork!
- Blindfold, noise-cancelling headphones, can't speak
- Each challenge provides information and perception about people with disabilities (such as videos and the way they need to solve the challenges)
- Heart rate, or hand signal (signing) pattern recognition technology

JOURNEY EXPERIENCE

SensEscape is not just a challenge but an invitation to step into someone else's reality

Thank You!
